ThermoFlex**X**

CHOICE OF PLATES

Printers and repro houses can use their ThermoFlexX imagers to expose any of the leading flexo and letterpress plates. The choice is theirs, since they don't have to be locked into a 'closed system solution'. With ThermoFlexX, they have complete freedom of choice.

PROFESSIONAL QUALITY

One of the key benefits of the ThermoFlexX imagers is their 5080ppi imaging resolution. In addition, ThermoFlexX customers swear by the manufacturing quality and reliability of Xeikon Prepress.

OPENNESS AND MODULARITY

ThermoFlexX imagers accept 1-bit TIFF files from any workflow or front-end. And the workflow can be as simple or as complex as the printer or repro house needs.

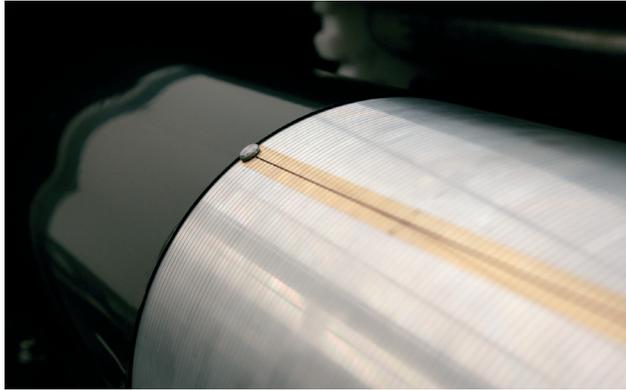

PROFESSIONAL SUPPORT

In a production environment, any solution is only as good as the service support behind it. In case of ThermoFlexX solutions, the installation and support teams are always available to help customers, together with the experts from local distribution partners.

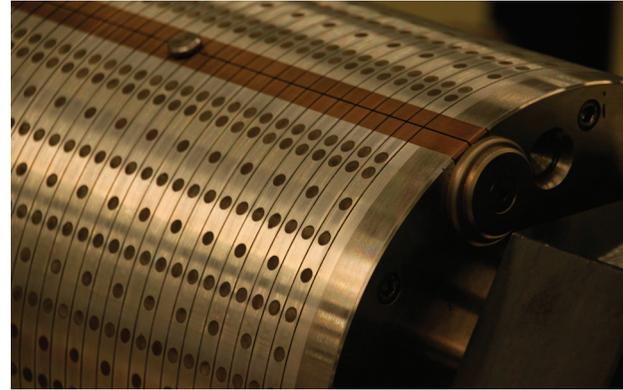

HIGH QUALITY, MODULAR AND OPEN SOLUTIONS FOR FLEXO & LETTERPRESS PLATES

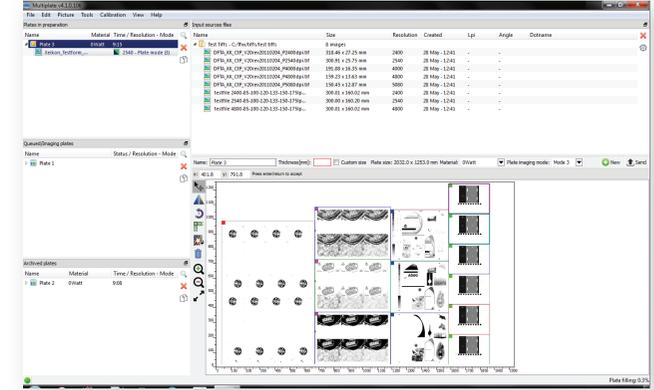

ThermoFlexX

Partial plate with unique vacuum slider concept.

Hybrid drum for Flexo and Steel back Letterpress plates.

MultiPlate interface SW between Prepress and ThermoFlexX imager.

RELEVANT UNIQUE FEATURES

No other digital imager offers the unique Vacuum Slider Concept (VSC). Based on smart design, printers can insert the plate in the advanced clamping system and slide the vacuum setting towards the plate edge. "That's it!" No more need for special tape constructions or cutting plates to fit dedicated vacuum zones, thus, allowing the use of cut-off scraps!

HIGH QUALITY IMAGING

The fiber laser is today's best technology for digital imaging, offering superior quality. The robustly designed ThermoFlexX is made out of heavy duty industrial components, which makes high speeds possible without fluctuations and vibrations. This offers accurate and consistent imaging quality.

UNIQUE RESOLUTION FLEXIBILITY

The ThermoFlexX imagers excel in their choice of resolution. Any of the following resolutions can be used: 2400, 2540, 4000, 4800 or 5080. With the 5080 dpi resolution, we push the quality standards to a higher level.

- Smaller screen dots resulting in finer details
- Cleaner mid-tones
- Sharper text, lines, barcodes and QR codes
- Capability to reproduce full image contrast, thanks to the abundance of gray levels even at high screening levels
- Switching between different resolutions while imaging

Flexo plate with different jobs at different resolutions

MULTIPLATE

Dedicated front-end software, combining simplicity with functionality, resulting in maximum productivity of your ThermoFlexX.

SMART TECHNICAL CHARACTERISTICS

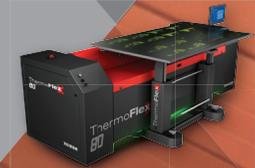

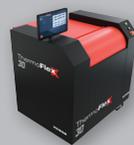

ThermoFlexX imagers are designed for smooth and productive operation.

- The advanced clamping system facilitates ergonomic and easy plate mounting.
- The standard vacuum drum and optional hybrid vacuum / magnetic drum assure accurate plate positioning and optimal exposure of flexo and letterpress plates.
- The integrated display enables fast, user friendly and reliable control of the imager.

A BROAD RANGE OF THERMOFLEXX DIGITAL IMAGERS

THE CHOICE IS YOURS

Whether you need tags, labels, flexible packaging, folding carton or corrugated packaging, ThermoFlexX imagers can do it all. They offer the required combination of size and productivity for any narrow, mid, or wide web application. All standard configurations are clear and straight-forward with no surprises of “extra” options!

THERMOFLEXX 60 & THERMOFLEXX 80 CUSTOMER DRIVEN TECHNOLOGY

THERMOFLEXX FLEXTRAY

With its unequalled loading and unloading concept, the ThermoFlexX 60 and 80 offers efficient and problem free plate handling by means of the FlexTray. The FlexTray facilitates the plate transport from the warehouse to the production area, easily aligning with any flexo equipment in the prepress room. The FlexTray table can be tilted so it simplifies transport from one room to another.

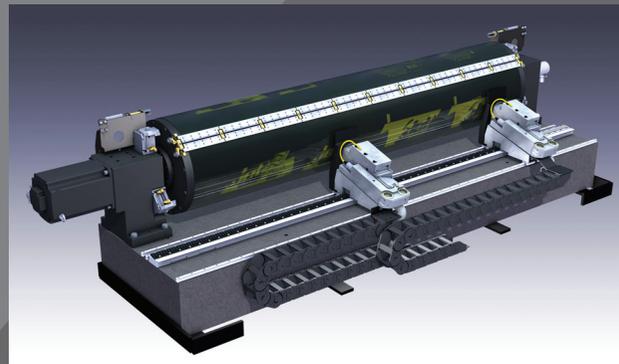

The FlexTray can be adjusted in height in order to level with all exposure and processing equipment. As an integral part of the ThermoFlexX 60 and 80, the FlexTray smoothly positions over the imager by means of guides. The guides navigate the FlexTray into the correct position over the ThermoFlexX.

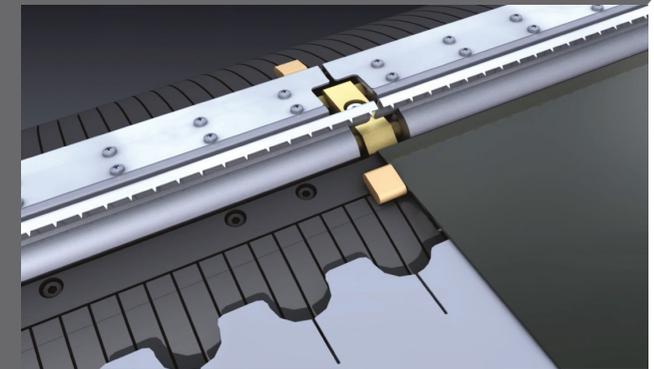

FlexTray for seamless plate handling.

GROW WITH YOUR BUSINESS

Have your ThermoFlexX imager grow along your own growth path and speed thanks to unique modularity. The possibility of adding an additional imaging head, not only results in more productivity, but also offers you an important level of redundancy.

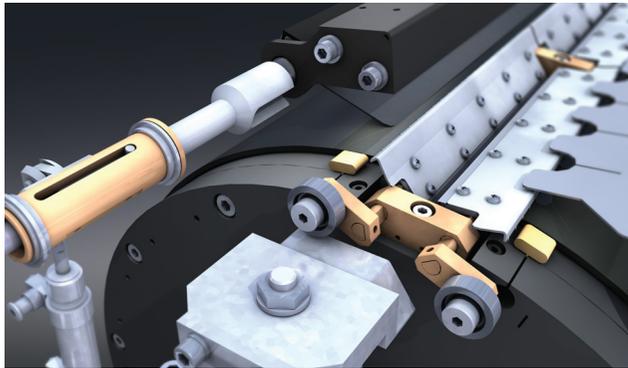

Modular design with dual head on TFX 60 & 80.

Automatic Vacuum slider on TFX 48, 60 an 80.

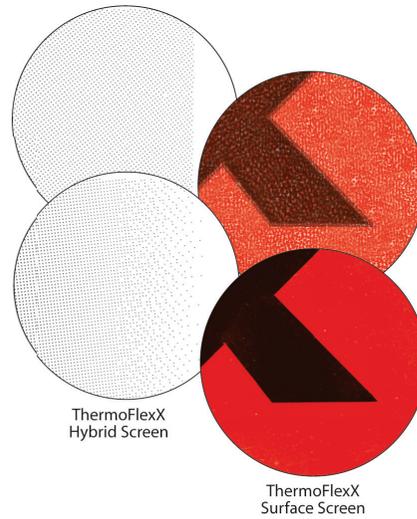

Thick Plate guidance.

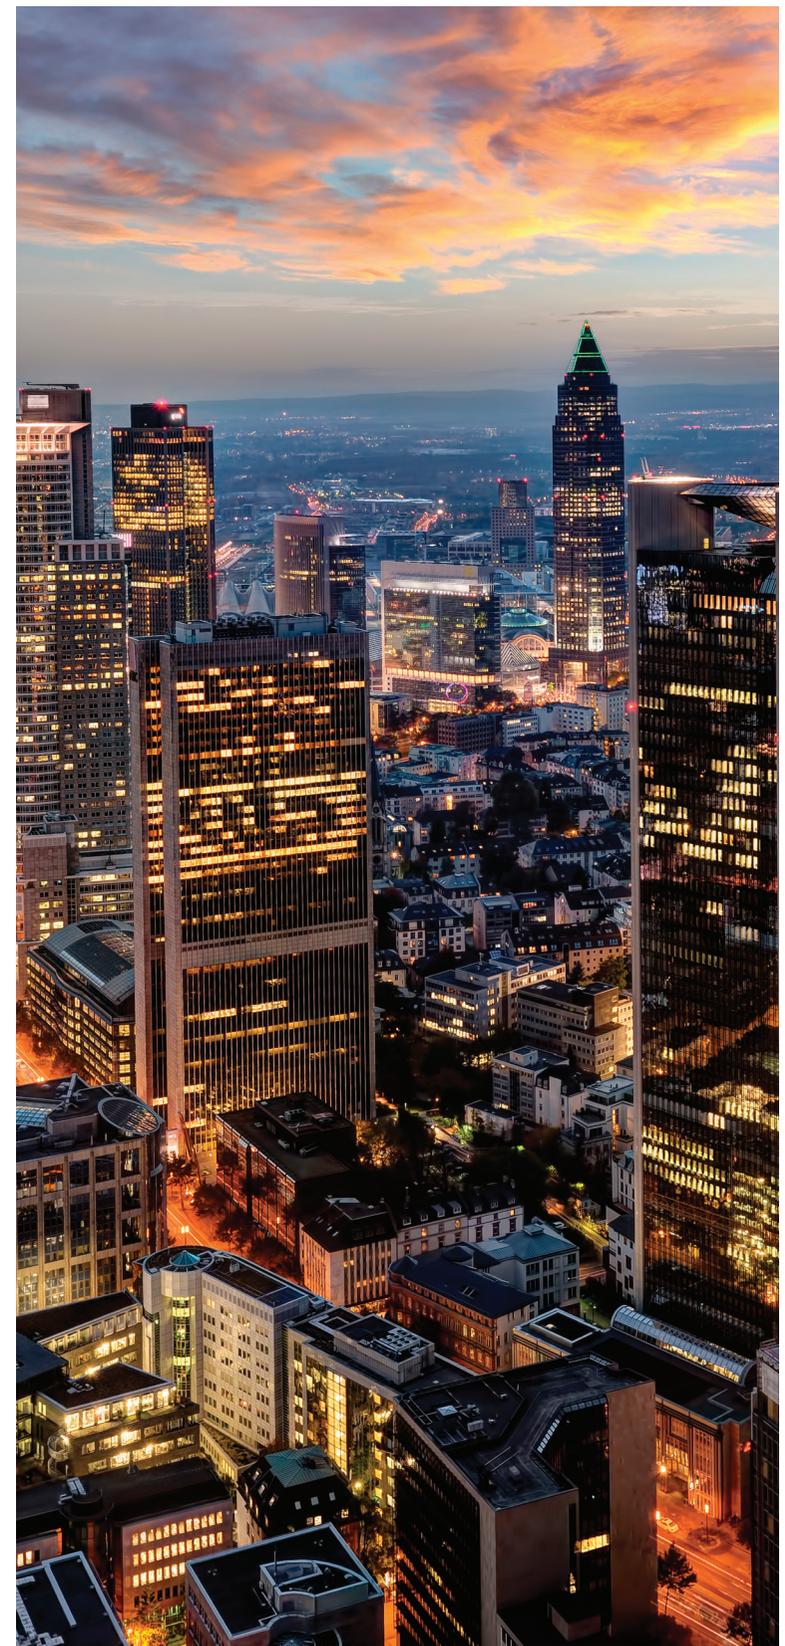

OPTIMIZED PLATE HANDLING

Not only does ThermoFlexX offers fully automated plate loading and unloading for any thickness, the imagers also offers a unique assistance for thicker plates, securing a problem-free operation.

INNOVATIVE SCREENING TECHNOLOGY

ThermoFlexX is compatible with all recent Screening technologies. ThermoFlexX Hybrid Screening improves details in the Highlights and Shadow while Surface Screening increases the Solid Ink Density offering a better quality of the print result.

ThermoFlexX

YOU'RE THE DRIVER

SOME ARE RULED AND SOME RULE

Xeikon Prepress has a long lasting reputation of manufacturing high quality Computer to Plate equipment. The basysPrint CtCP systems offer flexibility combined with outstanding quality using Conventional offset plates resulting in a very attractive ROI for commercial printers. The Newspapers CtP products, manufactured and designed under an exclusive OEM agreement for Agfa Graphics, are considered as the reference in the Newspaper industry.

For the flexographic market, Xeikon Prepress offers digital platemaking systems under the ThermoFlexX brand name. ThermoFlexX systems provide high-resolution plate exposure combined with flexibility and productivity.

Xeikon is also an innovator in digital printing technology. The company designs, develops and delivers web-fed digital color presses for label and packaging applications, document printing, as well as commercial printing. These presses utilize LED-array-based dry toner electro-photography, open workflow software and application-specific toners.

Xeikon is part of the Flint Group since 2015, integrated as the new "Digital Printing Systems" division. The Flint Group develops, manufactures and markets an extensive portfolio of printing consumables. These include a vast range of conventional and energy-curable inks and coatings, pressroom chemicals, printing plates, printing blankets and sleeves, pigments and additives for use in inks and other colorant applications. Headquartered in Luxembourg, Flint Group employs some 6800 people. On a worldwide basis, the company is a predominant supplier in every major market segment it serves.
